

Earlier Versions

In order to make PDF/X-1a:2001 quality PDF's using earlier versions of these programs:

**InDesign Versions 1.5, 2
Quark Versions 4, 5, 6
PageMaker Versions 6.5, 7**

It is recommended that you upgrade to a more current version of your software.

If this is not an option for you, we recommend that you send us your native files instead of PDF's. Native files include: page layout document, fonts, all graphics (logos, photos...).

Some versions of Quark have an option called Collect for Output... that will help you gather all the necessary components for your job.

Some versions of InDesign have an option called Package... that will help you gather all the necessary components for your job.

If you choose to send us your native files, please stuff or zip the files before you upload them to our FTP Site.

NOTE: We do not support native files in all of the earlier software versions listed above. We may need to open your native files by using a more current version of the software. This can cause some problems, mainly with text reflow.

If you have any questions or concerns, please contact your Customer Service Representative.
